

ASSIGNMENT-1 HOME AUTOMATION

Make a Smart Home in Tinkercad, using 2+ sensors, Led, Buzzer in single code and circuit.

Code:

// C++ code

```
#define t 7
#define e 6
#define bulb 2
```

```
void setup()
{
  Serial.begin(9600);
  pinMode(t,OUTPUT);
  pinMode(e,INPUT);
  pinMode(12,OUTPUT);
  pinMode(bulb,OUTPUT);
}
```

```
void loop()
{
  //ultrasonic sensor
  digitalWrite(t,LOW);
  digitalWrite(t,HIGH);
```

```
delayMicroseconds(10);
digitalWrite(t,LOW);
float dur=pulseIn(e,HIGH);
float dis=(dur/2)*0.0343;
Serial.print("Distance is: ");
Serial.println(dis);
if(dis<100){
digitalWrite(bulb,HIGH);
}
else{
digitalWrite(bulb,LOW);
}
```

```
//Temperature Sensor
double a= analogRead(A0);
double temp=((a/1024)*5)-0.5)*100;
Serial.print("Temp Value: ");
Serial.println(temp);
delay(1000);
```

```
//LED ON
if(temp>=100)
{
digitalWrite(8,HIGH);
}
//LED OFF
if(temp<100)
{
digitalWrite(8,LOW);
}
}
```
